

ABSTRACT OF THE DISCLOSURE

A server system for providing services from servers to clients can provide prompt responses and various services with small-scale server apparatuses. Data transmission between the servers and the clients is performed by means of data processing relay apparatuses. The server adds processing control information to data to be requested. The data processing relay apparatus performs processings on requested data transmitted from the servers in accordance with the processing control information in providing a service to the client apparatuses.
